## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Hansen *et al.* (US Patent No. 6,006,318, hereinafter "Hansen").
- 3. With respect to claims 1, 8 10, Hansen discloses a method for accessing a plurality of dynamic random access memory (DRAM) devices in parallel, each device having the same number of banks, in a parallel packet processor comprising:

partitioning a data word into data segments;

storing in parallel data segments of a data word into memory banks across a plurality of DRAM devices:

retrieving the data segments of a requested data word in parallel from the banks of the DRAM devices; and

reassembling the data segments into the data word (figure 13, col. 9, lines 16 - 25).

Application/Control Number: 10/734,082 Page 3

Art Unit: 2189

4. With respect to claim 2, retrieving data from memory in the order of request is how memory normally operates.

- 5. With respect to claims 3, 5 and 6, see figure 9. See also col. 4, lines 17 20.
- 6. With respect to claim 4, see figure 17.
- 7. With respect to claim 7, storing in parallel data segments of a data word into memory banks across a plurality of DRAM devices further comprises determining an in-bank burst length based upon the maximum word size (burst length is 1 for 64 bit words and 2 for 128 bit words), a total number of banks (4) in the plurality of DRAM devices and the data width of an individual bank (16 bits) and storing the data word in a burst having the in-bank burst length.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Woo H. Choi whose telephone number is (571) 272-4179. The examiner can normally be reached on M-F, 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matt Kim can be reached on (571) 272-4182. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
